# **UW-IT Privacy Checklist**

Keep your accounts, data, and devices private by following these tips from the UW-IT Privacy Office.

## **Devices**

- □ Set privacy controls and permissions
- □ Turn off location services
- □ Disable Wi-Fi and Bluetooth when not in use
- □ Turn off personalized ads
- □ Install and update data protection software
- □ Enable firewall and antivirus/spyware software
- □ Keep security programs up to date
- □ Encrypt your hard drive and sensitive files
- □ Protect mobile device data with auto-lock, Touch ID, and remote wiping

### Apps

- □ Review and set up apps' privacy practices
- □ Limit what data apps can access
- □ Turn off geolocation unless needed
- □ Require apps to ask permission to track
- □ Download apps only from official app stores
- □ Delete apps you no longer use to minimize data collection

### **Internet Browsing**

□ Review website privacy notices to understand how your data is collected and used

□ Block and delete cookies

- □ Use private browsers like Chrome Incognito, Firefox, or DuckDuckGo
- □ Opt out of ad tracking by using tools like the Digital Advertising Alliance
- □ Keep browsers and systems updated
- □ Only use secure website connections ("https") when sharing personal info
- □ Only shop on trusted websites
- □ Log off and sign out when you're done browsing

#### **Email Security**

□ Set up anti-email tracking in your device settings or by downloading an add-on

□ Beware of phishing emails - always verify the sender's email address carefully, even if it's someone you know

- □ Don't click on suspicious or unknown emails
- □ Use multiple email accounts for different purposes
- □ Delete old emails when they're no longer needed

#### **Social Media**

□ Think before posting - could an image, comment, or post reveal your location or be misused?

- □ Adjust privacy and account settings
- □ Set and adjust social media app permissions regularly
- □ If hacked, report it and alert your contacts

#### **Miscellaneous**

- □ Create strong, unique passwords for each account
- Use a password manager like LastPass
- □ Enable multifactor authentication whenever available
- □ Backup and securely dispose of digital files, devices, and paper records

 $\hfill\square$  Review old accounts (financial, health, sensitive) and close those no longer in use

Bookmark this checklist and review it once a month to stay secure!
